## Office Memorandum • UNITED STATES GOVERNMENT

TO : The Files

DATE: 1 June 1954

25X1

FROM :

25X1

SUBJECT:

25X1

1. [ ] called and stated that on the RS-6A's they had cleared up all deficiencies except image rejection, which was running in the order of 20 db rather than the specification requirement of 25 db. He proposed that [ ] be permitted to build 200 equipments with a 20 db limit, and during this time they would conduct an engineering investigation looking toward providing the balance of the units with a 25 db image rejection. He was queried as to whether [ ] having obtained the correction to meet the specification should then rework the 200 units to meet the specification requirement. He stated that they did not plan to do this, but would expect the Agency to accept the 200 units with the degraded performance.

2. It was called to [ ] attention that the prototypes submitted met the specification requirement and in fact ran as good as 33 db and that the Agency had approved the prototypes based on their meeting the 25 db requirement. Further the Agency had made certain waivers in [ ] favor. These have been agreed upon between [ ] and that [ ] had agreed to meet the specification requirements taking into consideration the waivers.

3. [ ] was informed that the Agency could not accept the 200 units unless they met specifications. He then stated that if that was the course of action we wished to take, they would cease production and continue their engineering investigation leading to the production of equipments meeting specification requirements.
